What Can You Do with Atloria?

Atloria helps teams turn project knowledge into organized documentation that can be created, reviewed, managed, and shared. Depending on your role, you might use Atloria to set up projects, write pages, manage releases, control access, review activity, publish public docs, or support customers with AI-powered answers.

Get Started and Access Your Workspace

Use Atloria to get into your account and move between the main entry points for your work.

- Sign in, register, and return to your workspace from Atloria's access pages
- Understand where to start when moving between home, sign-in, and registration screens
- Solve common access and sign-in issues
- Learn how account entry and session navigation work

Control Releases and Visibility

Atloria helps teams manage documentation versions, review readiness, and decide who can see what.

- Generate and manage documentation versions across a project
- Compare versions and track their status before release
- Request approval, approve changes, or reject a version that is not ready
- Control who can access a version and how visible it is
- Export documentation versions and related records when needed

Related areas in Atloria include documentation versions, approval workflow, version access control, audit trail, and export center.

Publish Public Documentation

Atloria supports public-facing documentation experiences for readers outside your private workspace.

- Publish documentation to public URLs
- Offer readers version switching so they can view the right release
- Present content for different audiences
- Give public readers a clear browsing experience across published documentation

Related areas in Atloria include public documentation viewer and audiences.

Use AI-Powered Documentation and Support Tools

Atloria includes AI-supported features that help teams create documentation and answer questions from project content.

- Generate documentation from project knowledge
- Configure AI-related settings and review usage
- Create support agents that answer questions using your documentation
- Manage and chat with support agents for self-service support
- Capture screenshots for use in documentation content

Related areas in Atloria include AI settings, support agents, and screenshot capture.

Connect Sources and Explore Supported Content

Atloria also helps teams connect outside sources and understand what kinds of project content Atloria can work with.

- Connect supported source providers and manage connection status
- Reconnect or remove a source connection when needed
- Review supported languages and frameworks
- Upload files or content into a parsing workspace and inspect the results
