Administer Enterprise Features

This page explains how to locate and review Atloria's enterprise-related resources so you can prepare your organization for enterprise planning, security review, and rollout. Use these controls to keep enterprise decisions aligned with commercial readiness and access-control needs.

Overview

Atloria groups enterprise-oriented resources around the **Enterprise** area and the broader **Atloria Stack**. These resources help you assess whether your organization is ready to support an enterprise customer, including commercial planning, security expectations, access control, and platform availability considerations.

You typically use these controls when you are preparing for an enterprise pilot, reviewing a contract opportunity, or coordinating a rollout across business and technical stakeholders. The available enterprise materials include **Commercial Readiness — Stripe, credits, plans, enterprise**, **Checklist — sell to an enterprise (pilot + contract)**, and 🔒 **Enterprise Security**.

Enterprise administration is a review and coordination activity. Before you roll out enterprise capabilities, use the available checklists and gap analyses to identify open decisions, assign ownership, and confirm that the intended plan and governance approach meet your customer's requirements.

Prerequisites

Before you begin, make sure you have:

- Access to the Atloria workspace where the **Enterprise** action is available.

- Permission to view organization planning, security, and enterprise-readiness materials.
- A defined enterprise use case, such as a pilot, contract discussion, or broader customer rollout.
- The stakeholders who can make decisions about commercial terms, access control, security, and availability.
- A list of the customer's requirements, including any security, governance, or uptime expectations.

Step-by-Step Instructions

1. Select **Enterprise** to open the enterprise-focused resources available in Atloria.
2. Select **Commercial Readiness — Stripe, credits, plans, enterprise** to review the commercial considerations that may affect your enterprise plan.
3. Review the plan, credit, and enterprise-readiness information shown in the commercial readiness resource.
4. Select **Checklist — sell to an enterprise (pilot + contract)** to open the enterprise sales and rollout checklist.
5. Review each checklist item with the stakeholders responsible for the pilot or contract.
6. Record the decisions your organization needs before committing to the enterprise rollout.
7. Select 🔒 **Enterprise Security** to review the security topics relevant to enterprise customers.
8. Compare the security expectations in the resource with the customer's stated security requirements.
9. Select **Cluster A — Enterprise & Access Control (Lane ①)** to review enterprise access-control considerations.
10. Identify the access-control decisions that must be agreed before users are invited or granted access.
11. Select **High Availability Features** to review availability-related capabilities that may be relevant to the planned rollout.

12. Confirm whether the customer’s availability expectations require additional planning or stakeholder approval.
13. Select **Atloria Stack** to return to the broader set of Atloria platform resources.
14. Select **Gap analysis — Atloria vs Lane 1** to review one available comparison of Atloria’s enterprise positioning.
15. Select the other available gap-analysis entries, such as **Gap analysis — Atloria vs Lane 2**, **Gap analysis — Atloria vs Lane 3**, and **Gap analysis — Atloria vs Lane 4**, when they apply to your evaluation.
16. Review **Gap analysis — Atloria's S0–S5 vs the lane** to compare maturity or stage expectations against the selected lane.
17. Use the **Search tools, features, classes...** field to find a specific enterprise topic when you do not know where it is located.

Tips and Best Practices

- Start with **Checklist — sell to an enterprise (pilot + contract)** when you are working toward a customer commitment. It provides a practical starting point for coordinating pilot and contract work.
- Review **Commercial Readiness — Stripe, credits, plans, enterprise** before making promises about commercial arrangements. This helps ensure that plan and credit considerations are reviewed alongside the enterprise opportunity.
- Treat 🔒 **Enterprise Security** and **Cluster A — Enterprise & Access Control (Lane ①)** as required review areas for enterprise rollouts, not as last-minute checks.
- Use the gap-analysis materials to identify differences between Atloria and the lane you are evaluating. Review every lane that is relevant to your target customer or rollout model.
- Include availability discussions early by reviewing **High Availability Features**. Availability expectations can affect rollout scope and stakeholder decisions.
- Use **Search tools, features, classes...** when you need to locate a known topic quickly instead of navigating through multiple resource areas.

- Keep enterprise decisions documented outside the review materials according to your organization’s governance process. The enterprise resources help guide review; your organization should still maintain its own approvals and decision records.

Troubleshooting

You cannot find an enterprise topic

Use the **Search tools, features, classes...** field and enter a distinctive word from the topic name, such as “security,” “availability,” “credits,” or “access control.” If the topic still does not appear, confirm that you have access to the workspace containing the enterprise resources.

The Enterprise action is not available

Confirm that you are signed in to the correct Atloria workspace and that your account has the required access. If the action remains unavailable, contact your Atloria administrator to request access to enterprise planning resources.

You are unsure which gap analysis to review

Start with the lane that most closely matches your current evaluation. If multiple lanes apply, review each relevant entry and then use **Gap analysis — Atloria's S0–S5 vs the lane** to compare the results against the maturity or stage model.
