Publish Your First Documentation Page

This page explains how to review and publish the documentation generated for a project version in Atloria. Publishing makes the reviewed documentation available to readers through the published documentation experience.

Overview

Atloria organizes documentation around projects and their versions. Before you publish, you review the documentation associated with a selected version to make sure it is ready for readers. The review area includes a **1 Review Summary** step and a **Back to Review** action, helping you return to the review process before publishing.

When a version is ready, use the 🚀 **Publish Version 4** action shown for that version. After publication, Atloria marks the version as **Published** and provides 🌐 **View Published Docs** so you can open the reader-facing documentation.

This workflow is intended for publishing documentation that Atloria has prepared for a project version. The available interface evidence shows version review and publication controls; it does not show a separate manual page editor with fields such as a page title or page body. Review the generated documentation carefully before using the publish action.

Prerequisites

Before you start, make sure you have:

- Access to the **Projects** area.
- A project that contains a version ready for review.
- Permission to publish the selected project version.

- Documentation content available in the project version's review area.
- Time to verify the content before readers can access it.

Step-by-Step Instructions

1. Click **Projects** to open the list of projects available to you.
2. Select the project whose documentation you want to publish.
3. Open the project version that contains the documentation you want readers to see.
4. Open the version's review area.
5. Select **1 Review Summary** to review the version's documentation summary.
6. Review the displayed documentation content for accuracy, completeness, and reader readiness.
7. Click **Back to Review** if you need to return from a later review or publication screen to the review workflow.
8. Complete any required review checks for the selected version.
9. Click  **Publish Version 4** to publish the version shown in the current screen.
10. Confirm the publication when Atloria asks you to proceed.
11. Verify that the version is labeled **Published** after the publication completes.
12. Click  **View Published Docs** to open the documentation as your readers will see it.

13. Read through the published documentation in the reader view.
14. Click **4. Published Docs Nav** to check the navigation available to documentation readers.
15. Confirm that the published page is reachable from the reader-facing documentation navigation.

Tips and Best Practices

- Review before publishing. The  **Publish Version 4** action publishes a version, so use **1 Review Summary** to verify the documentation before making it reader-facing.
- Treat publication as a version milestone. After you publish, the version displays the **Published** status. Make sure you are working in the intended version rather than reviewing an earlier or incomplete version.
- Check the reader experience after publishing. Clicking  **View Published Docs** is the fastest way to verify what documentation readers can access.
- Use the published navigation as a final quality check. The **4. Published Docs Nav** area helps you confirm that readers can move through the documentation as expected.
- Return to review when needed. If you discover an issue while checking publication, use **Back to Review** to return to the review workflow rather than assuming the published reader view is the place to make changes.
- Start from the project hub when managing multiple projects. The **Projects** screen provides a central place to find the correct project. You can also use **Search projects...** when the list is long.

Troubleshooting

You cannot find the project to publish

Return to **Projects** and use **Search projects...** to locate the project. If the project is still unavailable, confirm that you have access to it or ask a project administrator to grant access.

The publish action is not available

Make sure you are viewing a version that is ready for review and publication. Return to **1 Review Summary** and complete the required review process. If the version is already marked **Published**, you may be viewing a version that has already been released.

The published documentation does not look correct

Click  **View Published Docs** to confirm the reader-facing result, then select **Back to Review** to revisit the review workflow. Verify that you selected the intended project version before publishing.
