AzureModelProvider

Kind: Class

Source: [atloria-monorepo/libs/agent-core/src/runtime/model-adapter.ts](#)

Azure Model Provider — factory that returns AzureResponsesModel instances.
Passed to the SDK Runner as the modelProvider.

Supports model fallback: if a fallbackModel is configured, the provider wraps the primary model with automatic failover. When the primary model fails with a non-transient error (e.g., model unavailable, quota exceeded), it transparently switches to the fallback model for the rest of the run.

Inspired by Claude Code's FallbackTriggeredError → switch models pattern.

Implements: `ModelProvider`

Methods

Method	Signature	Returns
<code>getProfile</code>	<code>getProfile()</code>	<code>ModelCapabilityProfile</code>
<code>getModel</code>	<code>getModel(modelName: string)</code>	<code>AzureResponsesModel</code>
