DocsConfigEndpoints

Kind: Class

Source: [atloria-monorepo/packages/api-client/src/endpoints/docs-config.ts](https://github.com/atloria-monorepo/packages/api-client/src/endpoints/docs-config.ts)

Docs config endpoints

Routes are nested under the owning project (`/projects/:projectId/docs-config`) to match

the API's DocsConfigController. Reading a project that has no config row returns the default (`{ requireReview: false }`); setting upserts the row (MAINTAINER/ADMIN only).

Methods

Method	Signature	Returns
<code>get</code>	<code>get(projectId: string)</code>	<code>Promise<DocsConfig></code>
<code>set</code>	<code>set(projectId: string, config: DocsConfig)</code>	<code>Promise<DocsConfig></code>
