Embedder

Kind: Class

Source: [atloria-monorepo/libs/agent-core/src/semantic/embedder.ts](https://github.com/atloria-monorepo/libs/agent-core/src/semantic/embedder.ts)

Azure OpenAI embedding adapter.

Sends texts to the Azure OpenAI embeddings endpoint and returns vector representations. Handles batching, rate limiting, and error propagation.

Methods

Method	Signature	Returns
<code>embedBatch</code>	<code>embedBatch(texts: string[])</code>	<code>Promise<number[][]></code>
<code>embedQuery</code>	<code>embedQuery(text: string)</code>	<code>Promise<number[]></code>
<code>isConfigured</code>	<code>isConfigured()</code>	<code>boolean</code>

Where it refuses work

- `Embedder` stops the work with an early return when `texts.length === 0`.

When something fails

- `Embedder` handles failure in 2 places: it lets it reach the caller in all 2.
