EntitySelector

Kind: Class

Source: [atloria-monorepo/packages/doc-automation/src/v2/stages/stage-10-generation/entity-selector.ts](#)

EntitySelector - Smart entity selection for document generation

Selects entities based on:

1. Tier priority (TIER_1 > TIER_2 > TIER_3)
2. User-facing status
3. Document plan requirements
4. Token budget constraints

Methods

Method	Signature	Returns
<code>selectForDocument</code>	<code>selectForDocument(plan: DocumentPlan, entities: Entity[])</code>	<code>Entity[]</code>
<code>selectRelated</code>	<code>selectRelated(entityId: string, entities: Entity[])</code>	<code>Entity[]</code>
<code>selectByType</code>	<code>selectByType(entities: Entity[], types: Entity['type'][])</code>	<code>Entity[]</code>
<code>selectUserFacing</code>	<code>selectUserFacing(entities: Entity[])</code>	<code>Entity[]</code>
<code>selectByFeatureArea</code>	<code>selectByFeatureArea(entities: Entity[], featureArea: string)</code>	<code>Entity[]</code>

Where it refuses work

- `EntitySelector` stops the work with an early return when `!target` .
