KnowledgeCollector

Kind: Class

Source: [atloria-monorepo/packages/doc-automation/src/v2/stages/stage-10-generation/knowledge-collector.ts](https://github.com/atloria-monorepo/packages/doc-automation/src/v2/stages/stage-10-generation/knowledge-collector.ts)

Methods

Method	Signature	Returns
<code>collect</code>	<code>collect(doc: GeneratedDocument, meta: DocClassificationMeta)</code>	<code>void</code>
<code>getReference</code>	<code>getReference(category: MetaKnowledgeCategory)</code>	<code>MetaCategoryReference</code>
<code>getAllReferences</code>	<code>getAllReferences()</code>	<code>KnowledgeReferenceStore</code>
<code>finalize</code>	<code>finalize()</code>	<code>KnowledgeReferenceStore</code>
<code>getStats</code>	<code>getStats()</code>	<code>{</code>

```
totalDocsProcessed: number;  
totalDocsClassified: number;  
classificationFailures: number;
```

```
} |
```

Where it refuses work

- `KnowledgeCollector` stops the work with an early return when `!entries`.

When something fails

- `KnowledgeCollector` handles failure in 1 place: it turns it into a return value in all 1.
