LargeFileIndexer

Kind: Class

Source: `atloria-monorepo/packages/doc-automation/src/v2/stages/stage-01-parse/large-file-indexer.ts`

Large File Indexer - Creates indexes for files >500KB

Methods

Method	Signature	Returns
<code>isLargeFile</code>	<code>isLargeFile(filePath: string)</code>	<code>Promise<boolean></code>
<code>createIndex</code>	<code>createIndex(filePath: string)</code>	<code>Promise<LargeFileIndex></code>

Where it refuses work

- `LargeFileIndexer` stops the work with an early return when `firstlines.includes(marker)` .
- `LargeFileIndexer` stops the work with an early return when `pattern.test(fileName)` .
- `LargeFileIndexer` stops the work with an early return when `filePath.includes(dirPattern)` .
- `LargeFileIndexer` stops the work with an early return when `pattern.test(code)` .
- `LargeFileIndexer` stops the work with an early return when `foundOpen && braceCount === 0` .
- `LargeFileIndexer` stops the work with an early return when `match` .

When something fails

- `LargeFileIndexer` handles failure in 1 place: it turns it into a return value in all 1.
