McpClient

Kind: Class

Source: `atloria-monorepo/libs/agent-core/src/mcp/mcp-client.ts`

Methods

Method	Signature	Returns
<code>initialize</code>	<code>initialize()</code>	<code>Promise<McpServerInfo></code>
<code>listTools</code>	<code>listTools()</code>	<code>Promise<McpToolDefinition[]></code>
<code>callTool</code>	<code>callTool(name: string, args: Record<string, unknown>)</code>	<code>Promise<McpCallResult></code>
<code>close</code>	<code>close()</code>	<code>Promise<void></code>

Where it refuses work

- `McpClient` stops the work with an early return when `!pending` .

When something fails

- `McpClient` handles failure in 2 places: it logs it and continues in 1, and discards it silently in 1. A failure discarded silently leaves no trace for whoever debugs this later.
