Where it refuses work

- `MdxParser` stops the work with `Error` when `!content` — “Content is required for parsing”.
- `MdxParser` stops the work with an early return when `trimmed && !trimmed.startsWith('#') && !trimmed.startsWith('```') && !trimmed.startsWith(...)`.

When something fails

- `MdxParser` handles failure in 1 place: it turns it into a return value in all 1.
