OtlpExporter

Kind: Class

Source: [atloria-monorepo/libs/agent-core/src/tracing/otlp-exporter.ts](#)

Methods

Method	Signature	Returns
startSpan	startSpan(operationName: string, parentSpanId: string)	TraceSpan
endSpan	`endSpan(span: TraceSpan, status: 'ok'	'error')`
addEvent	`addEvent(span: TraceSpan, name: string, attributes: Record<string, string	number
setAttributes	`setAttributes(span: TraceSpan, attributes: Record<string, string	number
flush	flush()	Promise<void>
getPendingCount	getPendingCount()	number
shutdown	shutdown()	Promise<void>

Where it refuses work

- `OtlpExporter` stops the work with an early return when `!this.config.enabled || this.spans.length === 0`.

When something fails

- `OtlpExporter` handles failure in 2 places: it logs it and continues in 1, and discards it silently in 1. A failure discarded silently leaves no trace for whoever debugs this later.
