

# ParsingQueue

September 4, 2026

## ParsingQueue

**Kind:** Class

**Source:** `atloria-monorepo/apps/api/src/parsing/parsing.queue.ts`

**Implements:** `OnModuleInit`

## Methods

| Method                    | Signature                                    | Returns                                    |
|---------------------------|----------------------------------------------|--------------------------------------------|
| <code>onModuleInit</code> | <code>onModuleInit()</code>                  | <code>void</code>                          |
| <code>addParseJob</code>  | <code>addParseJob(data: ParseJobData)</code> | <code>Promise&lt;{ id: string }&gt;</code> |
| <code>getJobStatus</code> | <code>getJobStatus(jobId: string)</code>     | <code>Promise&lt;any&gt;</code>            |
| <code>cancelJob</code>    | <code>cancelJob(jobId: string)</code>        | <code>Promise&lt;boolean&gt;</code>        |

## Where it refuses work

- `ParsingQueue` stops the work with `Error` when `!dbJob` — “Job not found”.
- `ParsingQueue` stops the work with `Error` when `!cloneResult.success`.
- `ParsingQueue` stops the work with `Error` when `!project || !project.organization.users[0]` — “Project owner not found”.
- `ParsingQueue` stops the work with an early return when `!job`.

## When something fails

- `ParsingQueue` handles failure in 4 places: it logs it and continues in 2, and lets it reach the caller in 2.

## Referenced By

- `ParsingModule` (`MODULE_PROVIDES`)
- `ParsingService` (`DEPENDS_ON`)
