RegisterDto

Kind: Class

Source: `atloria-monorepo/apps/api/src/auth/dto/register.dto.ts`

Public registration DTO.

SECURITY: This DTO deliberately does NOT accept `organizationId` or `role`. Open registration always creates a fresh organization with the registrant as its ADMIN. Joining an existing organization is only possible through the invitation-token flow (see `InvitationService`). The global `ValidationPipe` uses `whitelist` + `forbidNonWhitelisted`, so payloads carrying extra fields like `organizationId` are rejected with 400.

Properties

Property	Type
<code>email</code>	<code>string</code>
<code>name</code>	<code>string</code>
<code>password</code>	<code>string</code>
