

# SdkGenerateWorker

September 4, 2026

---

## SdkGenerateWorker

---

**Kind:** Class**Source:** [atloria-monorepo/apps/sdk-worker/src/app/sdk-gen/sdk-generate.worker.ts](#)

The single consumer of 'sdk-generate' (this whole Deployment IS the worker — no env gating like the api-image workers need). One job = one language × one spec hash: load the project's CURRENT spec, verify it still matches the job's hash (content-addressing makes stale jobs a no-op, not a wrong artifact), run the pinned generator jar, zip, upload, flip the SdkArtifact row to READY.

**Implements:** `OnModuleInit` , `OnModuleDestroy`

## Methods

| Method                       | Signature                         | Returns                                |
|------------------------------|-----------------------------------|----------------------------------------|
| <code>onModuleInit</code>    | <code>onModuleInit()</code>       | <code>void</code>                      |
| <code>processJob</code>      | <code>`processJob(job: Job</code> | <code>{ data: SdkGenerateJob }`</code> |
| <code>onModuleDestroy</code> | <code>onModuleDestroy()</code>    | <code>Promise&lt;void&gt;</code>       |

## When something fails

- `SdkGenerateWorker` handles failure in 1 place: it lets it reach the caller in all 1.

## Referenced By

- `SdkGenModule` (MODULE\_PROVIDES)
