

SourceTruncationProcessor

September 4, 2026

SourceTruncationProcessor

Kind: Class

Source: `atloria-monorepo/libs/agent-core/src/context/history-processors.ts`

Hard character limit per tool output observation.

Prevents any single tool from injecting massive payloads into context.

Applied first in the pipeline so downstream processors work with bounded-size items.

Implements: `HistoryProcessor`

Methods

Method	Signature	Returns
<code>process</code>	<code>process(items: AgentInputItem[])</code>	<code>AgentInputItem[]</code>

Properties

Property	Type
<code>name</code>	<code>any</code>

Where it refuses work

- `SourceTruncationProcessor` stops the work with an early return when `!isToolOutput(item)`.
- `SourceTruncationProcessor` stops the work with an early return when `output.length <= this.maxChars`.
