

# SuggestionEndpoints

September 4, 2026

## SuggestionEndpoints

**Kind:** Class

**Source:** [atloria-monorepo/packages/api-client/src/endpoints/suggestions.ts](https://github.com/atloria-monorepo/packages/api-client/src/endpoints/suggestions.ts)

Suggestion endpoints

All routes are nested under the owning document

( `/documents/:documentId/suggestions/...` ) to match the API's

SuggestionController — the old flat `/suggestions/:id` paths never existed server-side.

## Methods

| Method              | Signature                                                                                     | Returns                                          |
|---------------------|-----------------------------------------------------------------------------------------------|--------------------------------------------------|
| <code>list</code>   | <code>list(documentId: string, params: Omit&lt;SuggestionListParams, 'documentId'&gt;)</code> | <code>Promise&lt;SuggestionWithUser[]&gt;</code> |
| <code>get</code>    | <code>get(documentId: string, suggestionId: string)</code>                                    | <code>Promise&lt;SuggestionWithUser&gt;</code>   |
| <code>create</code> | <code>create(documentId: string, dto: CreateSuggestionDto)</code>                             | <code>Promise&lt;SuggestionWithUser&gt;</code>   |
| <code>update</code> | <code>update(suggestionId: string, dto: UpdateSuggestionDto)</code>                           | <code>Promise&lt;SuggestionWithUser&gt;</code>   |
| <code>delete</code> | <code>delete(documentId: string, suggestionId: string)</code>                                 | <code>Promise&lt;void&gt;</code>                 |
| <code>accept</code> | <code>accept(documentId: string, suggestionId: string, reviewComment: string)</code>          | <code>Promise&lt;SuggestionWithUser&gt;</code>   |
| <code>reject</code> | <code>reject(documentId: string, suggestionId: string, reviewComment: string)</code>          | <code>Promise&lt;SuggestionWithUser&gt;</code>   |
