TourEventDto

Kind: Class

Source: [atloria-monorepo/apps/api/src/tours/dto/experience.dto.ts](https://github.com/atloria-monorepo/apps/api/src/tours/dto/experience.dto.ts)

Public widget → events endpoint. Kept loose on purpose: the endpoint is sendBeacon-compatible (text/plain payloads bypass the JSON body parser), so the controller re-validates by hand after a manual parse. This DTO documents the accepted shape for swagger + typed handling.

Properties

Property	Type
type	string
projectId	string
experienceId	string
sessionId	string
stepOrder	number
selector	string
url	string
score	number
comment	string
