

VueParser

September 4, 2026

VueParser

Kind: Class

Source: [atloria-monorepo/apps/frontend-parser/src/parsers/vue.parser.ts](#)

Implements: [IParser](#)

Methods

Method	Signature	Returns
<code>initialize</code>	<code>initialize(config: ParserConfig)</code>	<code>Promise<void></code>
<code>canParse</code>	<code>canParse(filePath: string)</code>	<code>boolean</code>
<code>parseFile</code>	<code>parseFile(filePath: string, content: string)</code>	<code>Promise<ParseResult></code>
<code>parseFiles</code>	<code>parseFiles(files: ParseFileInput[])</code>	<code>Promise<ParseResult[]></code>
<code>destroy</code>	<code>destroy()</code>	<code>Promise<void></code>

Properties

Property	Type
<code>name</code>	<code>string</code>
<code>version</code>	<code>string</code>
<code>supportedPatterns</code>	<code>string[]</code>

Where it refuses work

- `VueParser` stops the work with an early return when `!this.canParse(filePath)`.
- `VueParser` stops the work with an early return when `!fileContent.trim()`.
- `VueParser` stops the work with an early return when `!scriptContent && !hasTemplate`.

- `VueParser` stops the work with an early return when `!scriptContent.trim()` .

When something fails

- `VueParser` handles failure in 4 places: it turns it into a return value in 2, logs it and continues in 1, and discards it silently in 1. A failure discarded silently leaves no trace for whoever debugs this later.
