WriteNotPermittedError

Kind: Class

Source: [atloria-monorepo/apps/api/src/docs-pr/git-write/git-write.adapter.ts](#)

Thrown when the repo cannot be written — the GitHub App lacks contents:write / pull_requests:write (the installation hasn't re-consented), or no installation/token is available. The orchestrator records this as status:'error' and NEVER touches the repo, so the feature degrades gracefully instead of breaking anything.

Extends: `Error`
