Kind: Constant

Source: `atloria-monorepo/apps/web/src/app/reader-api/[...path]/route.ts`

WEB-4 phase 1 — same-origin reader → public-API proxy.

The reader (on any docs origin) calls `/reader-api/<public-path>` instead of the cross-origin public API. This handler runs on the web server, reads the `httpOnly` reader-token cookie (set by `/reader-api/session`), attaches it to the upstream call as the `X-Atloria-Reader-Token` header, and streams the response back — so the token never reaches browser JS. Absent cookie → forwarded unauthenticated (non-gated docs still work).

The reader passes the project id it already knows via the `x-reader-project` header (a public id, not a secret) so the proxy can select the right per-project cookie.

Dormant until `NEXT_PUBLIC_READER_COOKIE_AUTH` is on and the reader routes through it.
