EXPLORER_THEME_CSS

Kind: Constant

Source: `atloria-monorepo/packages/ui-core/src/components/api-explorer/theme.ts`

The mode-resolving sheet.

Rule order is load-bearing. The blocks have comparable weight, so the later ones win where they overlap:

1. light default — applies when nothing else has an opinion.
2. OS dark — guarded so an explicit `light` disables it entirely.
3. explicit dark (`data-atloria-theme="dark"` , or `/app` 's `.dark` class).
4. explicit light — last, so it beats every dark rule above it, the OS included.
