MAX_PROXY_UPLOAD_BYTES

Kind: Constant

Source: [atloria-monorepo/apps/api/src/technical-docs/playground-proxy.service.ts](https://github.com/atloria-monorepo/apps/api/src/technical-docs/playground-proxy.service.ts)

How much upload this proxy will carry.

A browser streams a file of any size straight to the API; this route cannot, because it holds

the whole thing in memory as base64 (a third larger again) inside a JSON envelope.

Over the

limit the request is REFUSED with a reason the playground shows, rather than truncated or

OOM-ing the pod. Mirrored client-side as MAX_PROXY_UPLOAD_BYTES in `packages/ui-core/src/components/api-explorer/APIExplorer.ts` — this one is the enforcement.
