MEGA_FILE_DEFAULT_PHASES

Kind: Constant

Source: [atloria-monorepo/packages/doc-automation/src/v2/types/mega-file.types.ts](https://github.com/atloria-monorepo/packages/doc-automation/src/v2/types/mega-file.types.ts)

Default mega-file extraction strategy

For a 12,560 line Angular component:

Phase 1: Extract class signature and all method names (overview)

Phase 2: Extract all state-related code (stage/status handling)

Phase 3: Extract all validation code

Phase 4: Extract all user-action handlers

Phase 5: Extract DevExtreme configurations from template

Definition

```
MegaFilePhase[]
```
