/security — radical openness, not badge theater. Everything here is a control you can read: server-injected credentials, an SSRF-guarded executor with its own test suite, layered redaction burned into pixels, and self-host. We state compliance HONESTLY: what's in place (architecture) vs what we haven't earned yet (SOC 2 / ISO / pen test). No certifications claimed. No CORS claim made. Design: light + colorful (matches /product/agent-actions), dark code panels.
