applyConfiguredOAuth2

Kind: Function

Source: `atloria-monorepo/apps/api/src/project/playground-oauth2.ts`

Merge the owner's OAuth2 declaration into a spec's `components.securitySchemes` .

A scheme the SPEC already declares under the same id wins: an imported or authored spec is a first-hand statement about the API, and this overlay exists to fill the gap for specs generated from source, which can never carry one.

Signature

```
function applyConfiguredOAuth2(spec: Record<string, unknown>, settings: Record<string, unknown>
```

Parameters

Name	Type
<code>spec</code>	<code>Record<string, unknown></code>
<code>settings</code>	<code>`Record<string, unknown></code>

Returns: `Record<string, unknown>`
