applyDiscoveryDocument

Kind: Function

Source: `atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts`

Fill an `openIdConnect` scheme in from its discovery document.

A provider that advertises `code_challenge_methods_supported` WITHOUT `S256` is refused: PKCE

is the only thing standing between a public client and a stolen authorization code, and `plain` does not provide it. A provider that advertises nothing is taken at its word — the field is optional, and every current provider that omits it supports S256.

Signature

```
function applyDiscoveryDocument(scheme: OAuth2Scheme, doc: DiscoveryDocument): OAuth2Scheme
```

Parameters

Name	Type
<code>scheme</code>	<code>OAuth2Scheme</code>
<code>doc</code>	<code>DiscoveryDocument</code>

Returns: `OAuth2Scheme`
