buildSeatbeltProfile

Kind: Function

Source: `atloria-monorepo/libs/agent-core/src/tools/bash-sandbox.ts`

Build a macOS Seatbelt profile (SBPL) that:

- Denies everything by default
- Allows global file reads (metadata, data, xattr)
- Allows file writes only within rootDir
- Allows process exec/fork (needed for sh, node, npm, git, etc.)
- Allows signal sending to own process group

Signature

```
function buildSeatbeltProfile(rootDir: string): string
```

Parameters

Name	Type
<code>rootDir</code>	<code>string</code>

Returns: `string`
