buildVideoDirective

Kind: Function

Source: `atloria-monorepo/packages/doc-automation/src/v2/stages/stage-13-upload/video-directive.ts`

Build the `:::video{...}` container directive from a resolved spec. The reader's remark plugin reads these attributes; chapters ride URL-encoded so the JSON survives directive attribute parsing intact.

Signature

```
function buildVideoDirective(spec: ChapteredVideoSpec): string
```

Parameters

Name	Type
<code>spec</code>	<code>ChapteredVideoSpec</code>

Returns: `string`
