chooseFlow

Kind: Function

Source: [atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts](https://github.com/atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts)

Pick the flow to run, or state why none can be.

Authorization code wins whenever it is offered. Implicit runs ONLY when the spec declares

nothing else: it returns the token in the URL fragment, where it lands in the address bar and

can leak through history or a referrer, and OAuth 2.1 drops it outright — so it is a last resort for an API that offers no alternative, never a shortcut past a code exchange.

Signature

```
function chooseFlow(flows: OAuth2Flows | undefined): {  
  kind: OAuth2FlowKind | null;  
  refusal?: OAuth2Refusal;  
}
```

Parameters

Name	Type
<code>flows</code>	<code>OAuth2Flows</code>

Returns: `{ kind: OAuth2FlowKind | null; refusal?: OAuth2Refusal; }`
