

collectGenericModels

September 4, 2026

collectGenericModels

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/openapi/model-schemas.ts`

Build `components.schemas` from every database-model entity the parse produced. Returns an empty object when the repo has no such models, so callers need no special case.

Signature

```
function collectGenericModels(entities: Entity[]): Map<string, ModelSource>
```

Parameters

Name	Type
<code>entities</code>	<code>Entity[]</code>

Returns: `Map<string, ModelSource>`
