collectSubsystemEvidence

Kind: Function

Source: atloria-monorepo/libs/parser-core/src/techdocs/subsystem-narrative.ts

Everything the sections below are allowed to say, gathered in one pass over the members.

`internalDependents` and the boundary weights are supplied by the caller, which is the only place that knows which subsystem owns which entity.

Signature

```
function collectSubsystemEvidence(members: Entity[], internalDependents: Map<string, number>, i
```

Parameters

Name	Type
<code>members</code>	<code>Entity[]</code>
<code>internalDependents</code>	<code>Map<string, number></code>
<code>inboundEdges</code>	<code>Record<string, number></code>
<code>outboundEdges</code>	<code>Record<string, number></code>
<code>inboundTargets</code>	<code>Map<string, number></code>

Returns: `SubsystemEvidence`
