constructedResponseSchema

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/response-origin.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/response-origin.ts)

The response schema implied by what the handler actually returns.

Follows the returned expression — through a delegating service call, a local `const`, a `.map()`, an object literal — until it reaches something whose shape is stated in the repo:

an ORM call naming a model, a literal, or a constructed object whose keys are right there.

Signature

```
function constructedResponseSchema(method: MethodDeclaration, ctx: OriginContext): Record<string, unknown> | undefined
```

Parameters

Name	Type
<code>method</code>	<code>MethodDeclaration</code>
<code>ctx</code>	<code>OriginContext</code>

Returns: `Record<string, unknown> | undefined`
