September 4, 2026

consumeFragmentToken

Kind: Function

Source: `atloria-monorepo/apps/web/src/app/p/[slugId]/lib/readerToken.ts`

On an SSO / magic-link return the token arrives in the URL FRAGMENT (`#readerToken=...`). Consume it: return the raw token and strip the fragment from the address bar so it never lingers in history. Storage happens once we know the projectId (the caller passes it or resolves it via `/access/branding`).

Signature

```
function consumeFragmentToken(): string | null
```

Returns: `string | null`
