convertSpecsToMappingsFlattened

Kind: Function

Source: [atloria-monorepo/packages/doc-automation/src/v2/stages/stage-12-screenshots/spec-to-mapping-converter.ts](#)

Convert specs to mappings, flattening workflow sequences into individual step mappings. Each step gets its own mapping with `parentPlaceholderId` and `sequenceOrder` so the replacer can reassemble them.

Signature

```
function convertSpecsToMappingsFlattened(specs: ScreenshotSpec[]): ScreenshotMapping[]
```

Parameters

Name	Type
<code>specs</code>	<code>ScreenshotSpec[]</code>

Returns: `ScreenshotMapping[]`
