createAPIClient

Kind: Function

Source: [atloria-monorepo/apps/web/src/lib/api-client.ts](#)

Create an API client for the Atloria application

This client makes HTTP requests to the backend API

Signature

```
function createAPIClient(config: {  
  apiUrl: string;  
  getToken?: () => string | null;  
  /** True while NextAuth is still resolving the session – the fetcher waits instead of firing  
  isSessionLoading?: () => boolean;  
}): APIClient
```

Parameters

Name	Type
config	{
apiUrl: string;	
getToken?: () => string	null;
/** True while NextAuth is still resolving the session — the fetcher waits instead of firing unauthenticated. */	
isSessionLoading?: () => boolean;	
}	

Returns: APIClient
