createProjectForFiles

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/schema-resolver.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/schema-resolver.ts)

Build a ts-morph Project scoped to specific files + their import graph (the DTOs those files

reference), NOT the whole repo. This is the memory-bounded path for OpenAPI resolution: the

framework parse already loaded the repo once, so globbing the entire tree here would load a

SECOND full project (a memory doubler that OOMs large monorepos). Loading only the controller

files and resolving their dependencies keeps the second project to the API surface.

Signature

```
function createProjectForFiles(rootDir: string, filePaths: string[]): Project
```

Parameters

Name	Type
rootDir	string
filePaths	string[]

Returns: Project
