createRehydrationHook

Kind: Function

Source: [atloria-monorepo/libs/agent-core/src/context/rehydration.ts](https://github.com/atloria-monorepo/libs/agent-core/src/context/rehydration.ts)

Create a PostCompactionHook that reads files from disk.

This is the "hard rehydration" implementation — actually reads files rather than nudging the agent to re-read them.

Signature

```
function createRehydrationHook(config: RehydrationConfig): PostCompactionHook
```

Parameters

Name	Type
config	RehydrationConfig

Returns: PostCompactionHook
