

CustomDomainPage

September 4, 2026

CustomDomainPage

Kind: Function

Source: `atloria-monorepo/apps/web/src/app/customdomain/[host]/page.tsx`

Custom-domain entry point (docs.customer.com)

The middleware rewrites any non-Atloria host → `/customdomain/{host}/*`

This page resolves the host to a published project via the API (only `status=live` domains resolve), then redirects to the existing `/p/[slugId]` routes which handle all the rendering — same pattern as `/subdomain/[slug]`.

Signature

```
async function CustomDomainPage({ params }: CustomDomainPageProps)
```

Parameters

Name	Type
<code>{ params }</code>	<code>CustomDomainPageProps</code>
