declaredResponseSchema

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/openapi/response-origin.ts](https://github.com/atloria-monorepo/libs/parser-core/src/openapi/response-origin.ts)

The response schema the handler's swagger decorators declare for `status`, if any.

`@ApiResponse({ status: 200, description: '...' })` with no `schema / type` declares nothing about the body and is ignored — a description is prose, not a shape.

Signature

```
function declaredResponseSchema(method: MethodDeclaration, status: string, ctx: OriginContext):
```

Parameters

Name	Type
<code>method</code>	<code>MethodDeclaration</code>
<code>status</code>	<code>string</code>
<code>ctx</code>	<code>OriginContext</code>

Returns: `Record<string, unknown> | undefined`
