deriveCaption

Kind: Function

Source: [atloria-monorepo/apps/web/src/components/Viewer/captionRules.ts](https://github.com/atloria-monorepo/apps/web/src/components/Viewer/captionRules.ts)

Decide whether an image's alt text is a meaningful

.

Returns the trimmed caption, or null when it should be suppressed because it is empty, a generic placeholder word, a bare filename, or a duplicate of the page heading (the page already renders that title as the H1).

Signature

```
function deriveCaption(alt: string, documentTitle: string): string | null
```

Parameters

Name	Type
alt	string
documentTitle	string

Returns: string | null
