describeGuard

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/control-flow-render.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/control-flow-render.ts)

A refusal, phrased so the condition stays verbatim and only the framing is ours.

The message is the developer's own sentence and carries more than the condition does — a reader

learns more from "Project has no repository URL configured" than from

`!project.repoUrl` — so

it leads when present and the condition follows in code.

Signature

```
function describeGuard(actorName: string, guard: GuardClause): string
```

Parameters

Name	Type
<code>actorName</code>	<code>string</code>
<code>guard</code>	<code>GuardClause</code>

Returns: `string`
