

detectFastApiUpload

September 4, 2026

detectFastApiUpload

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/openapi/multipart.ts`

FastAPI: `UploadFile`, `File(...)` and `Form(...)` parameters.

A route with ANY `File` / `Form` parameter is multipart — FastAPI switches the whole body over

— so the `Form` fields are emitted as text parts of the same body, not as query parameters.

Signature

```
function detectFastApiUpload(signature: string): MultipartBody | undefined
```

Parameters

Name	Type
<code>signature</code>	<code>string</code>

Returns: `MultipartBody` | `undefined`
