detectMulterUpload

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/openapi/multipart.ts`

Express/multer: `upload.single('avatar')` in a route's middleware position.

Pass ONLY the middleware argument slices — a whole route call would drag an inline handler

body in with it, where an unrelated `.any()` or `.array()` would read as an upload.

Signature

```
function detectMulterUpload(middleware: string): MultipartBody | undefined
```

Parameters

Name	Type
<code>middleware</code>	<code>string</code>

Returns: `MultipartBody | undefined`
