detectSubsystems

Kind: Function

Source: [atloria-monorepo/libs/parser-core/src/techdocs/subsystems.ts](https://github.com/atloria-monorepo/libs/parser-core/src/techdocs/subsystems.ts)

Subsystems, most load-bearing first.

`minEntities` keeps a stray folder of two helpers from being presented as an architectural component — a section a reader opens and learns nothing from costs more than its absence.

Signature

```
function detectSubsystems(entities: Entity[], relationships: Relationship[], { minEntities = 8,
```

Parameters

Name	Type
<code>entities</code>	<code>Entity[]</code>
<code>relationships</code>	<code>Relationship[]</code>
<code>{ minEntities = 8, limit = 12 }</code>	<code>{ minEntities?: number; limit?: number }</code>

Returns: `Subsystem[]`
