detectUIInteractions

Kind: Function

Source: `atloria-monorepo/libs/parser-core/src/utils/ui-interaction-detector.ts`

Extract UI interactions from component template code

Analyzes HTML/JSX templates to find interactive elements (buttons, links) and maps them to state machine transitions.

Signature

```
function detectUIInteractions(templateCode: string, stateMachines: StateMachine[], componentName: string): UIInteraction[]
```

Parameters

Name	Type
<code>templateCode</code>	<code>string</code>
<code>stateMachines</code>	<code>StateMachine[]</code>
<code>componentName</code>	<code>string</code>

Returns: `UIInteraction[]`
