detectZeroProgress

Kind: Function

Source: [atloria-monorepo/libs/agent-core/src/benchmark/agent-hardening.ts](#)

Detect consecutive turns with zero tokens (likely API failures).

If the last N turns all produced 0 tokens, the agent is stuck — probably hitting rate limits or auth errors silently.

Signature

```
function detectZeroProgress(turnHistory: Array<{ tokens: number }>, threshold: number): boolean
```

Parameters

Name	Type
turnHistory	Array<{ tokens: number }>
threshold	number

Returns: boolean
