encodeHotspots

Kind: Function

Source: `atloria-monorepo/packages/doc-automation/src/v2/stages/stage-13-upload/video-directive.ts`

URL-safe encoding of the clickable hotspot list (rides the directive attribute like chapters, so the JSON survives directive attribute parsing intact).

Signature

```
function encodeHotspots(hotspots: VideoHotspot[]): string
```

Parameters

Name	Type
<code>hotspots</code>	<code>VideoHotspot[]</code>

Returns: `string`
