escapeHtml

Kind: Function

Source: [atloria-monorepo/apps/api/src/changelog/changelog-markdown.ts](https://github.com/atloria-monorepo/apps/api/src/changelog/changelog-markdown.ts)

Tiny, dependency-free helpers for the changelog surfaces: HTML/XML escaping and a minimal markdown → HTML renderer good enough for release notes (headings, bold, inline code, links, bullet lists, paragraphs). Feeds and emails must never ship raw user/AI markdown as HTML without escaping first — everything below escapes BEFORE applying markup.

Signature

```
function escapeHtml(s: string): string
```

Parameters

Name	Type
s	string

Returns: string
