

exchangeCodeForToken

September 4, 2026

exchangeCodeForToken

Kind: Function

Source: `atloria-monorepo/packages/ui-core/src/components/api-explorer/oauth2.ts`

Exchange the authorization code for a token, directly from the browser.

No `client_secret` is sent — this is a public client, and PKCE's verifier is what proves the exchange belongs to the request that started it.

Signature

```
async function exchangeCodeForToken(exchange: TokenExchange): Promise<OAuth2Grant>
```

Parameters

Name	Type
<code>exchange</code>	<code>TokenExchange</code>

Returns: `Promise<OAuth2Grant>`
